

Valves and Actuators

iSMACONTROLI

We focus on BMS future

→ iSMA CONTROLLI - 85 years of experience

Controlli S.p.A. (established in 1936), a leading Italian manufacturer of valves and actuators for residential and commercial HVAC applications, and Global Control 5 S.A. (established in 2015), a Polish fast-growing company that operates in the development, design and manufacturing of advanced solutions in building automation under the "iSMA" brand, have formed a joint group called iSMA CONTROLLI S.p.A. in May 2021.

With the joint activities and the integration of the teams and products of both companies under one brand iSMA CONTROLLI creates a new international player in the building automation market - a pioneer in providing state-of-the-art solutions in the BMS world. This enormous potential comes from the merging of such different companies: Italian and Polish, mature and young, involved in mechanical and electronic engineering, with experience in direct sales and distribution. The majority shareholder is B.Group, an industrial holding that supports the growth of companies through direct investments in their capital, in partnership with entrepreneurs and management.

iSMA CONTROLLI has two manufacturing and engineering sites where activities are carried out in the name of modernity, technological innovation and, last but not least, respect for the environment and safety: in Sant'Olcese (Italy) for valves and actuators and Gdansk (Poland) for electronics and controllers.

The management system according to ISO 9001: 2008 represents a 360° quality guarantee that involves not only the product but also the management of the production, logistics and sales processes of iSMA CONTROLLI Italy. iSMA CONTROLLI operates through direct sales on B2B channels in more than 40 countries around the world and distributors in more than 25 countries. The commercial network is made up of direct officials and a dense network of agencies, coordinated by the offices in Italy and Poland and by the commercial offices in Milan, Padua and Rome, to ensure widespread coverage for business-to-business channels (systems engineering, OEM) and for that of end-users through a network of authorized resellers.

The punctuality of deliveries, the flexibility and quality of our equipment and our services are recognized reasons for satisfaction for our customers and the solidity of our brand represents a guarantee of continuity over time.

* The port of Genoa

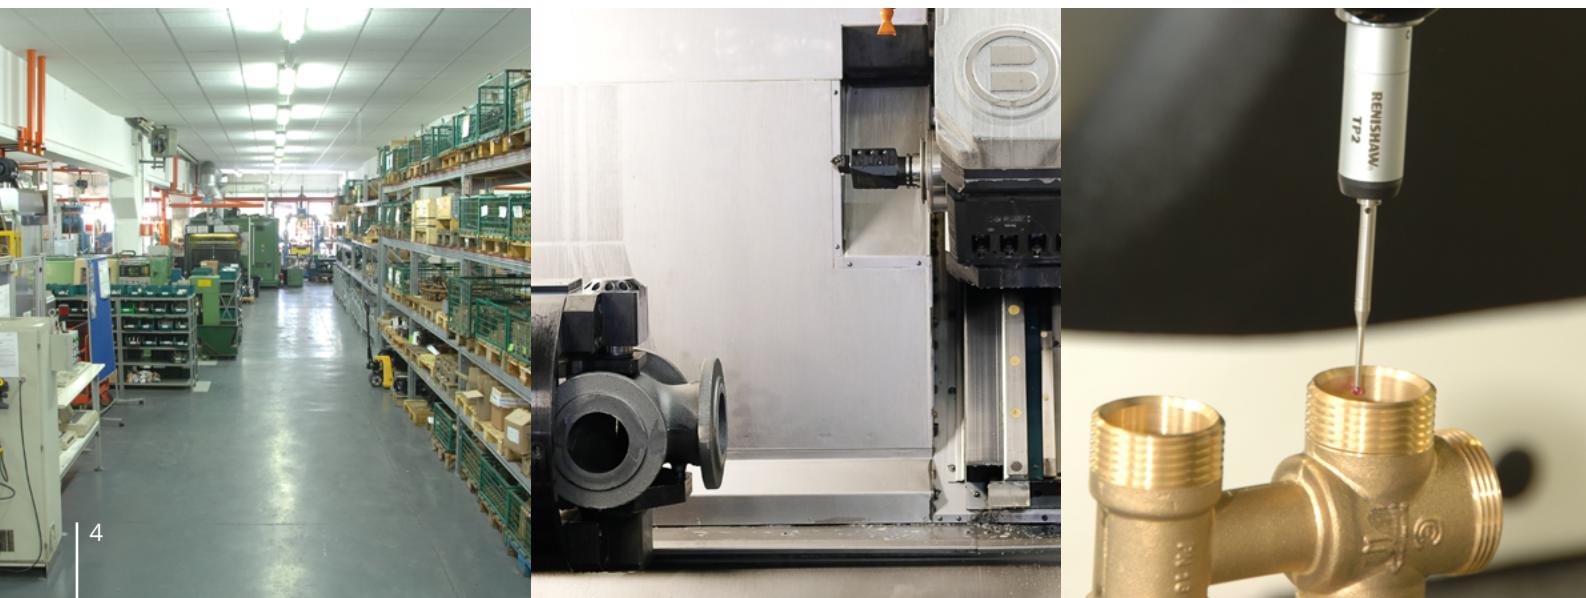

→ Product quality is iSMA CONTROLLI n°1 commitment

iSMA CONTROLLI Italy operates under ISO9001-2008 Quality Certificate System. All iSMA CONTROLLI valves are PED (Pressure Equipment Directive) compliant. Products are tested 100%.

An industrial area of 6000 m² in Sant'Olcese (Genoa) is iSMA CONTROLLI head office. Production is highly automated with robotic devices for the assembly and calibration of mechanical and electronic spare parts and finished products.

It is worth mentioning the robotic plant for processing, mounting and testing of valve bodies and the robotized workcell for assembly, testing and certification of fan coil valve actuators.

iSMA CONTROLLI Italy has adopted the SIX SIGMA procedures, further elevating the quality standard of its products.

→ An extensive selection of Control Valves

We are proud to offer one of the largest range of valves and actuators in the HVAC market. Valves range from 15 mm to 200 mm for fluids with temperature from -30 °C to +350 °C, max. pressure 30 bar (water) or 12 bar (steam). Valves types include 2-way & 3-way globe valves, ball valves, PICVs,

butterfly valves. Linear actuators start at 90 N and go up to 3000 N. Some models are equipped with Modbus connectivity. Rotary actuators are offered as well: from 6 Nm to 40 Nm to motorize butterfly valves or ball valves and for direct mounting on air dampers up to 2 sqm.

page 6

PICVs

PN16 dynamic pressure independent control valves 1/2" to 2" and DN65 to DN150 with On/Off or proportional actuators suitable to fluids up to 120 °C. Energy valves DN65 to DN150

page 12

MOTORIZED VALVES FOR FCUs

Brass valves for FCUs 2way, 3way, 3way + bypass, Kvs 0,25 to 6, with On-Off / Modulating thermic actuators (140N force) and 3 pos. / Modulating electric actuators (300N force).

page 22

GLOBE VALVES WITH THREADED CONNECTIONS

Cast iron or bronze PN16 valve bodies with threaded connections 1/2" up to 2" for fluids from -10 °C to +150 °C.

page 28

GLOBE VALVES WITH FLANGED CONNECTIONS

PN16, PN25, PN40 globe valves with flanged connections DN15 to DN200, suitable to fluids (water, glycol, steam, thermal oil) from -30 °C to +350 °C.

page 38

GLOBE VALVE ACTUATORS

Linear actuators from 300N to 3000N, with or without spring return. Includes MVE range of new generation actuators 400N, 600N, 1000N, 1500N & 2200N force with self adjusting and auto diagnostic capabilities.

page 46

MOTORIZED BUTTERFLY VALVES

PN16 butterfly valves, 100% tight close-off, DN25 to DN200 to be motorized by MDL or MDA actuators (up to 40Nm).

→ Pressure Independent Control Valves

PICVs

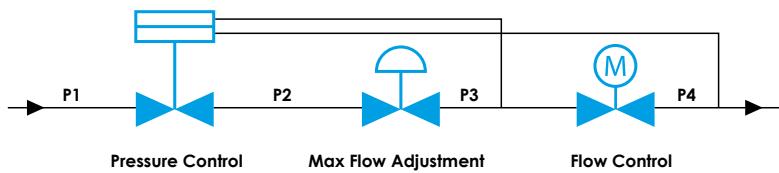

Dynamic pressure independent control valves with threaded and flanged connections

Controlli PICVs are ideal for use in heating/cooling variable flow systems and provide constant flow regulation within a given range of differential pressure drop.

Dynamic balancing eliminates overflows regardless of fluctuating pressure conditions in the system.

3 PRODUCTS IN 1

- » Control Valve
- » Differential Pressure Controller
- » Static flow limiting valve

- » One PICV replaces up to three separate valves (a 2-way control valve, a flow limiting valve, a differential pressure control valve)
- » Constant flow regulation under varying pressure conditions
- » Optimum control in heating and cooling circuits with variable systems
- » Flow rate can be precisely set at its specified design value
- » Constant differential pressure across the control valve regardless of changes in pump speed or valves closure elsewhere in the system
- » Authority close to 100%
- » Linear valve characteristic regardless of the pre-set value
- » 100% stroke always available regardless pre-set value
- » No cartridge design
- » Very low hysteresis

Easy selection & commissioning

- » Always select the smallest valve capable of delivering the design flow rate
- » Very quick selection also with thousands of units thanks to our PICV selection tool
- » Simple commissioning: it is just a matter of selecting one of the pre-set values on the valve caliber
- » Use our formulas for valve caliber setting for a quick flow estimation
- » Easy ΔP measurement with our DMP700 differential pressure meter (up to 700kPa)

• Pressure Independent Control Valves

LIBRA NEW

VLX are **PN16** pressure independent control valves suitable to a wide range of hydronic applications in the building automation industry. Fan-coil units and chilled beams are among the most typical applications for pressure independent control valves; as a matter of fact, the aim for energy saving has progressively encouraged the use of variable speed pumps requiring 2-port valves in lieu of traditional 3-port mixing valve. The design of LIBRA valve combines high performance with small size and compact construction. All VLX valves are tight close-off and equipped with an EPDM diaphragm for deltaP control. The knob for the setting of the max. flow is on the bottom of the valve thus allowing adjustments without the removal of the actuator.

→ Pressure Independent Control Valves

EBV NEW

Modbus

EBV valves represent an innovative solution to manage the efficiency of cooling and heating circuits. The key functions are: pressure independent flow control and energy consumption management.

EBV range includes valves from DN65 to DN150 suitable to flow rates from 12 to 177 m³/h. Valves are supplied already fit with MVEBV515 smart actuator.

FEATURES	EBV_0	EBV_1
PICV	✓	✓
Energy valve	-	✓
Valve / actuator already assembled together	✓	✓
Pressure transducers (x2)	✓	✓
Temperature sensors (x2)	-	✓
P/T test points	✓	✓
MVE-NET smart actuator	✓	✓
DN65 to DN150 valve sizes (flow rates from 12 to 177 m ³ /h)	✓	✓
Pressure independent flow control	✓	✓
Flow rate calculation	✓	✓
Minimum and maximum flow value setting	✓	✓
Analogue Inputs (0..10 Vdc, 4..20 mA)	✓	✓
Modbus connectivity	✓	✓
Valve control and feedback also via Modbus	✓	✓
DeltaT (temperature diff. between supply and return water) control loop	-	✓
Power (kW) and energy (kWh) calculation of the heat exchanger	-	✓
Power (kW) and energy (kWh) control	-	✓
Local PID control (embedded in the actuator) on T or deltaT	-	✓
Remote monitoring of energy consumption	-	✓
Configuration through micro USB	✓	-

MVEBV515 smart actuator is equipped with: Modbus connectivity, micro USB port, PID control loop, analogue inputs (0..10 Vdc, 2..10 Vdc, 4..20 mA), Valve control and feedback also via Modbus.

Modbus connectivity allows integration of EBV into BMS and makes commissioning and monitoring activities very easy. Configuration of EBV can also be achieved through the micro USB port available on the front of MVE-NET actuator.

MOD.	DN	MIN FLOW [m ³ /h]	MAX FLOW [m ³ /h]	PN	MAX ΔP [kPa]	POWER SUPPLY
EBV65	65	12	37			
EBV80	80	25	59			
EBV100	100	45	77			
EBV125	125	61	118			
EBV150	150	80	177	16	35-800	24 Vac/dc 230 Vac

65 = DN65, max flow 37 m³/h
80 = DN80, max flow 59 m³/h
100 = DN100, max flow 77 m³/h
125 = DN125, max flow 118 m³/h
150 = DN150, max flow 177 m³/h

0 = No emergency return
1 = With emergency return

024 = Power supply 24 Vac/dc
230 = Power supply 230 Vac

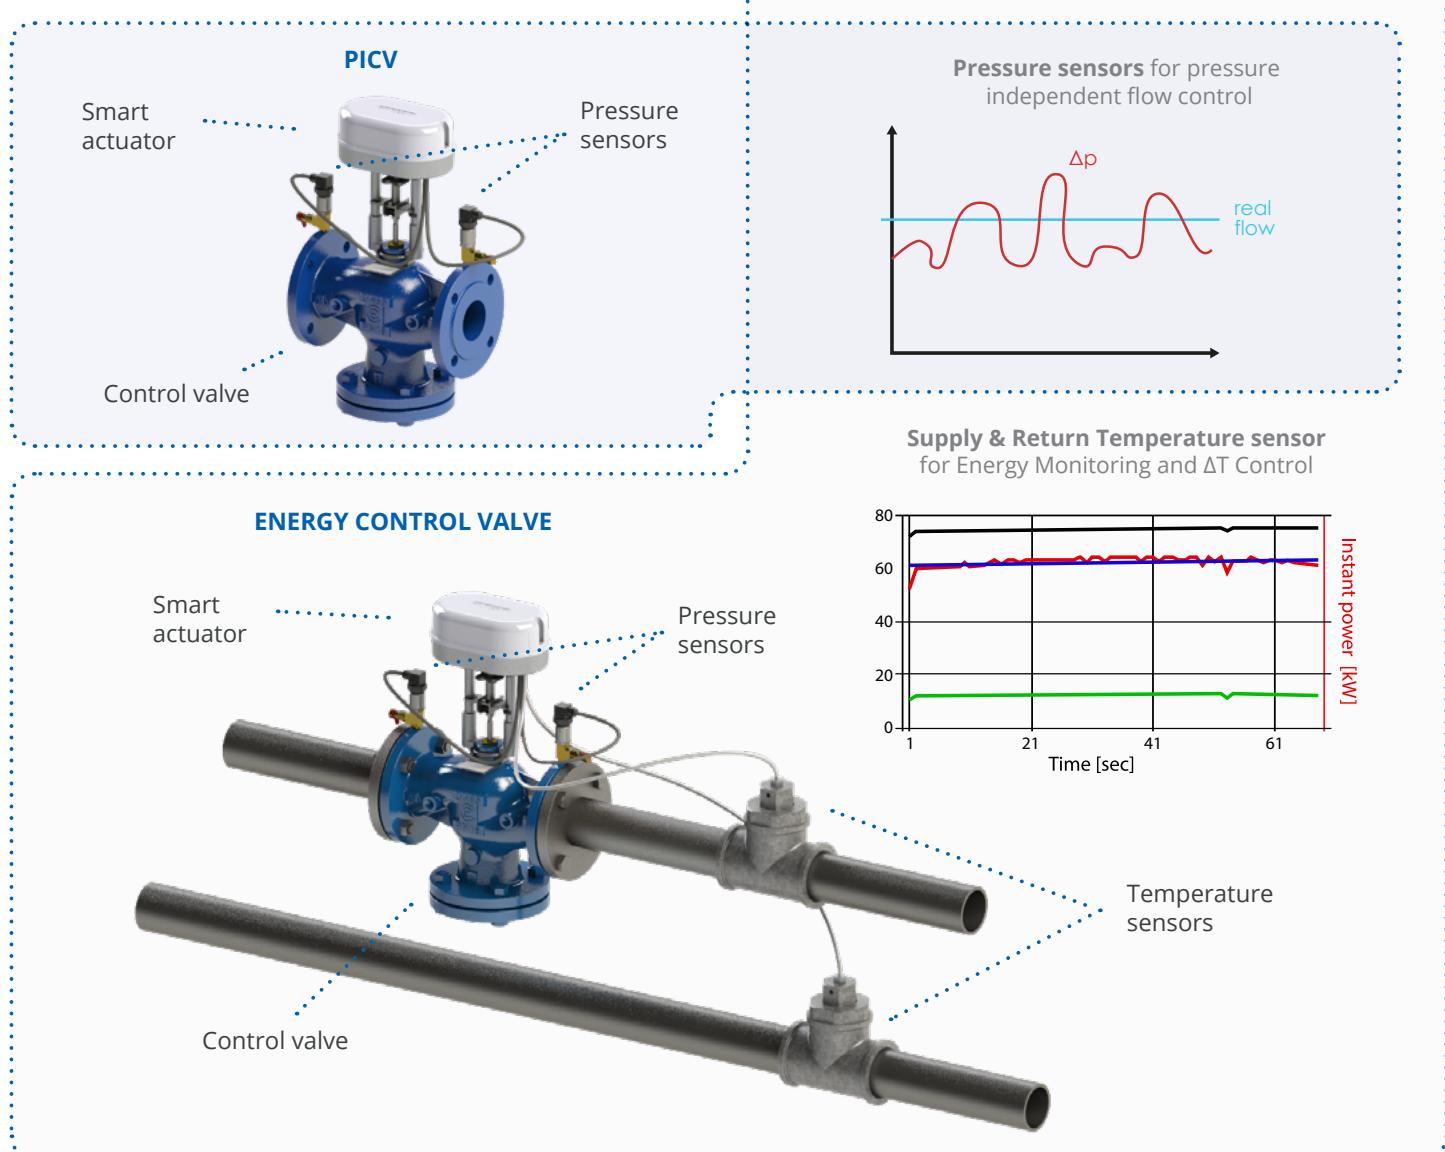

EBVXX-XXX-X0X

0 = Modbus connection

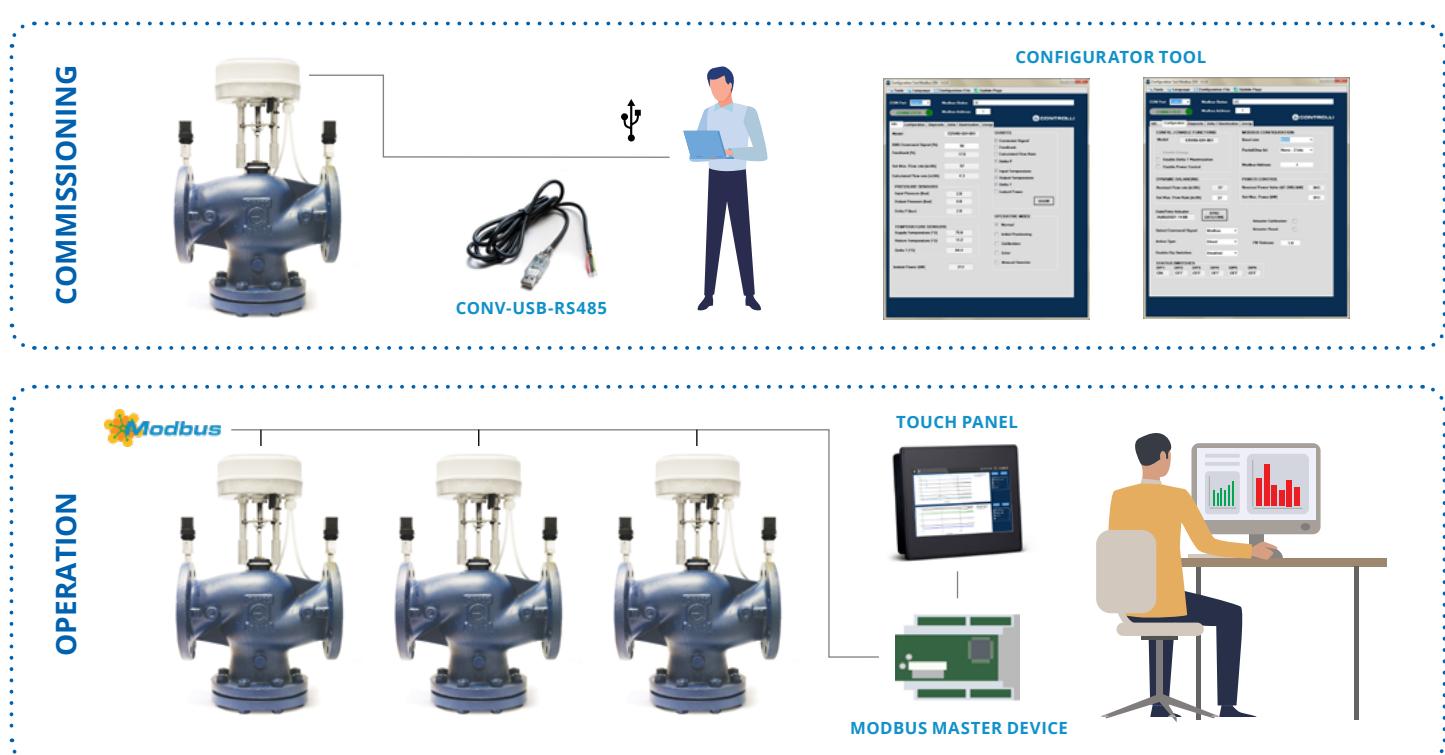

0 = No temperature sensors
1 = With temperature sensors

Example: **EBV65-024-001** → Max flow 37 m³/h, DN65, 24 Vac/dc, No emergency return, with Modbus connection, with Energy function enabled and 2 temperature sensors included

	KITAV2 Labour (assembling and testing, kit with 2-way valve or PICV)
	KITAV3 Labour (assembling and testing, kit with 3-way valve)
COIB	Thermal insulation of the whole kit

APPLICATION AND USE

Controlli valve linking kits are designed to connect a fan coil unit directly into a building's chilled water or hot water network. Each kit includes an inbuilt factory-assembled set of valves and accessories in order to reduce on site installation and commissioning times and to prevent potential future system leakage from fan coil unit systems. It may also include a balancing valve with pressure tests points, installed on the return line.

All necessary components are installed as a single item which is then 100% pressure-tested in the factory prior to delivery to site.

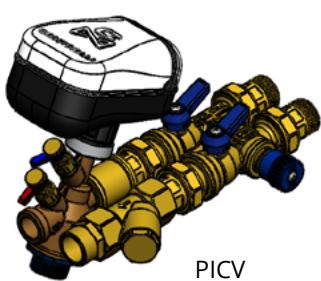

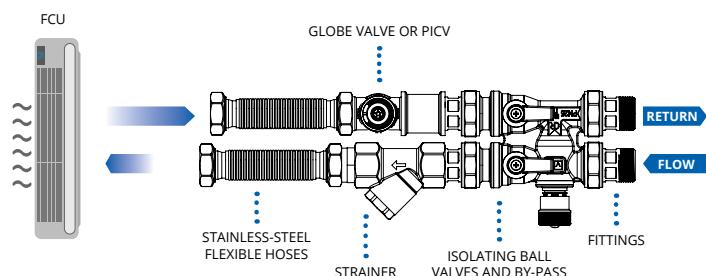

No specific tools are needed for installation. A built-in bypass section includes a full port isolating valve to enable coil and circuit flushing and cleaning to be carried out without the need to switch off the attached fan coil unit.

Thermal insulation can be added too.

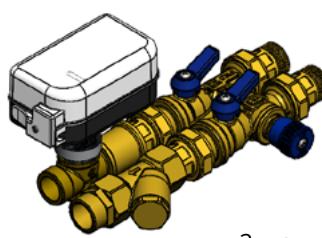

All products are manufactured, assembled and tested in Italy.

TECHNICAL CHARACTERISTICS

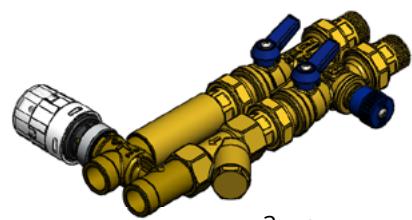

Material: DZR brass
Pressure class: PN16 (flexible hoses are PN10)
Fluid temperature range: 0°C to 120°C

PICV

2-way

3-way

Creating a valve linking kit is as easy as 1 2 3

1 SELECT YOUR BYPASS

To make it easy, we have reduced the range to three models only, all including a flow limitation and isolation valves to allow different directions of the water as needed during the normal operation of the terminal unit as well as flushing, cleaning or isolation for maintenance operations. Compact design suitable also for installations with limited space.

2 SELECT YOUR VALVE AND ACTUATOR

Valve type and size need to be selected according to the circuit specifications and nominal flow rates. You can choose between a variety of types (2way globe valve, 3way mixing globe valve, PICV with or without P/T plugs, 2way ball valve, 3way mixing or diverting ball valve) and sizes (1/2", 3/4", 1"). We always recommend selecting a globe valve using the Kvs value (flow rate and pressure drop) and a PICV using the nominal flow rate.

3 CHOOSE YOUR OPTIONS

We can fit stainless-steel hoses with different length in order to match closely your FCU dimensions. Having all parts already assembled in our factory will save a lot of installation time on site. See below what accessories are available. Other options and variants are available on demand.

CODE	DIMENSION "A"	THREADED CONNECTIONS f1, f2, p1, p2	VALVE	ACTUATOR SERIES

→ Valves for Fan-Coil Units

MICRA®

Motorized valves with compact dimensions for FCUs

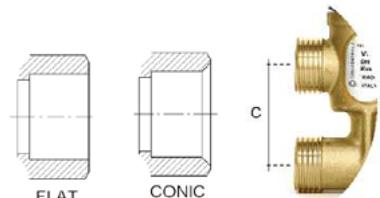

Micra® is our successful range of motorized valves for fan coil units.

Range consists of PN16 brass (CW617N) valve bodies with compact dimensions: 2way, 3way, 3way-4ports
With sizes 1/2" and 3/4" and Kvs from 0,25 to 6.

Valves are 100% tight close-off.

All valve bodies are available with either flat end threaded connections or conic (Conex).
4-ports versions (3way with bypass) are available with different port-to-port distances (C)

1/2" models with Kvs up to 1,6:	35 mm or 40 mm distance
3/4" models with Kvs up to 2,5:	40 mm or 50 mm distance
3/4" models with Kvs up to 6:	44 mm distance

VSX (2-way), VMX (3-way), VTX (3-way 4-ports)

- Valves with 2,5 mm stroke
- For electro-thermal actuators (On/Off or modulating)
- Totally silent
- Spring return (Normally Open & Normally Closed depending on actuator models)
- No friction, no wear
- Price competitive solution

VSXT (2-way), VMXT (3-way), VTXT (3-way 4-ports)

- Valves with 5,5 mm stroke
- For electro-mechanical actuators
- Faster opening / closing times
- Higher close-off
- Better modulating control
- 3 pos. control also available

→ Valves for Fan-Coil Units

VP NEW UNIQUE SOLUTION IN OUR MARKET!

PN16 valves in high performance composite for FCUs

Valves are made of FRP = Fibre-Reinforced Polymer thanks to which they reach the same performances of brass valves: 16 bar, 95°C.

Main advantages: 0% lead therefore fully compliant with ROHS and REACH, no rust, high thermic insulation, no condensation, high resistance to dirty water, light weight.

Range consists of: 2-way and 3-way valves, $\frac{1}{2}$ Kvs 1,6 and $\frac{3}{4}$ Kvs 2,5.

Fittings in FRP also available.

VP series are motorized by MVP On/Off thermal actuators with 170N force and MVX52B proportional thermal actuator with 140N force.

Model	MIXING			DIVERTING			Max ΔP without noise

 If MVP actuator is not powered VP valve is CLOSED

→ Thermic Actuators

MVP **NEW**

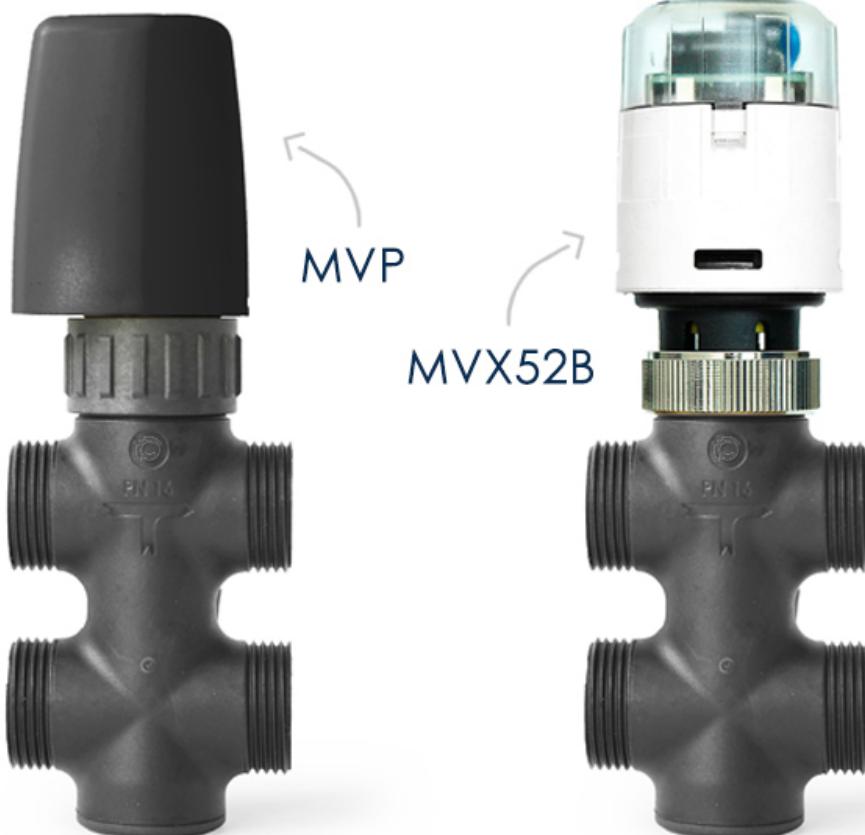

Electrothermal actuator **170 N** for VP series

On/off and PWM control - Fast opening/closing times - 24 Vac/dc, 110-230 Vac, 50-60 Hz
IP44 - 4,0 mm stroke - M30x1,5 connection - 170 N force

Starting time 60 sec. Auxiliary microswitch.

Operation MVP: without power supply MVP spindle is in "outside" position;
when powered MVP pulls the spindle "inside".

MODEL	MAX STROKE [mm]	POWER SUPPLY	FORCE [N]	ACTION	AUXILIARY MICROSWITCH

MCA

Valve Adaptive concept without adapters

Protection from condensation and from leaking regardless of the valve position (throughout 360°)

Function Indicator Pin visible from any direction.

Fast installation thanks to our Manual Override Position.

MCA has not only a protection from condensation and from water leak whichever is the mounting position (IP54 also upside down), but it is designed to be adapted to the majority of underfloor heating manifolds and zone valves up to 4 mm stroke available on the market without the need of any adapters. Another peculiarity of MCA is the Manual Override position, which allows opening and closing the valve/manifold through an easy operation and without powering the actuator.

Last but not least, the MCA is equipped with an ON/OFF Position Indicator, visible from any directions, which allows an easy and

fast installation.

As for any other Controlli product, the reliability and quality are key requirements, that's why our products continuously undergo life tests and each MCA is tested before being shipped to the customer.

MCA is available with or without a end-stroke switch contact and with the possibility to be powered with 110/220 Vac or 24 Vac/dc.

MCA is then the ideal product for installers and distributors who can use it on any manifolds/valves but also for OEMs thanks to its high performances, its installation quickness as well as the possibility to be customized for example with the customer's logo.

MODEL	POWER SUPPLY [Vac]	AUXILIARY MICROSWITCH	FORCE [N]	STROKE [mm]	PROTECTION

MCA24L	24	-			
MCA24LM		•			

• Thermic Actuators

MVR

Electrothermal actuator **140 N** for manifolds, radiant panels and PICVs

On/off and PWM control - Fast opening/closing times - 24 Vac/dc, 110-230 Vac, 50-60 Hz - IP44 - 4,0 mm stroke - M30x1,5 connection on valves/manifolds - 140 N force
Starting time 60 sec. Auxiliary microswitch. Operation MVR (not MVR.V): without power supply MVR spindle is in "outside" position; when powered MVR pulls the spindle "inside". All models are also available with auxiliary microswitch; when ordering this version, add the letter "M" to the model code, e.g. MVR230MC2 or MVR24MV.

MODEL	STEM OUTPUT	POWER SUPPLY	FORCE [N]	ACTION
MVR230	10,7÷11,8	110-230 Vac	140	on-off
MVR24	10,7÷11,8	24 Vac/dc	140	on-off, PWM
MVR230V	Compatible with MICRA valves	110-230 Vac	140	on-off
MVR24V		24 Vac/dc	140	on-off, PWM
MVR230C1 ¹⁾	12,3÷13,4	110-230 Vac	140	on-off
MVR24C1 ¹⁾	12,3÷13,4	24 Vac/dc	140	on-off, PWM
MVR230C2 ¹⁾	11,3÷12,4	110-230 Vac	140	on-off
MVR24C2 ¹⁾	11,3÷12,4	24 Vac/dc	140	on-off, PWM
MVR230C3 ¹⁾	10,3÷11,4	110-230 Vac	140	on-off
MVR24C3 ¹⁾	10,3÷11,4	24 Vac/dc	140	on-off, PWM

1) Models suitable to manifolds or valves of many different brands.
Please check Controlli "MVR_DB310e" data sheet for details.

Customizable

Thanks to a little plastic stem adapter, our MVR thermal actuators are suitable to a number of different valves or manifolds.

Connection is M30x1,5. All materials are self-extinguishing rated V0. An indicator shows the open/closed position of the actuator.

MVX52B

Electro-thermal actuator **140 N** for MICRA valves and PICVs (pressure independent control valves)

MVX52B is a proportional 0..10 Vdc actuator suitable to a variety of applications:

- normally closed on pressure independent control valves;
- normally open on Controlli Micra® valves (VSX, VMX, VTX)
- normally closed on manifolds.

The actuator-valve assembly is easily achieved thanks to the M30x1,5 threaded ring nut. Actuator has a 4 mm fixed stroke and provides a proportional reverse action with 0-10 Vdc control signal.

The actuator is equipped with a potentiometer which allows to limit the valve maximum opening stroke (selectable from 20% to 100%).

When power is OFF: actuator spindle is completely inside.

When power is ON and control signal is 0 Vdc: actuator spindle is completely out (bottom position if mounting is vertical);

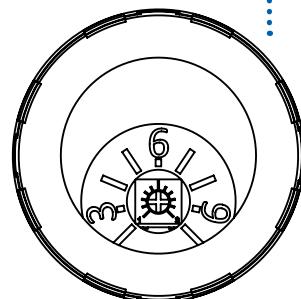

When power is ON and control signal is 10 Vdc: actuator spindle is completely inside (top position if mounting is vertical).

For example, if the potentiometer is set to 6 (60%):

- maximum stroke becomes 2,4 mm
- with 0 Vdc signal actuator spindle is in the bottom position and with 10 Vdc signal actuator reaches 60% of the whole stroke (2,4 mm).

Micra® valves closure is guaranteed only by selecting 100%

More features: 24 Vac power supply at 50/60 Hz; 2 m cable triple-pole (0,35 mm²); IP44 protection; 140 N force; 4 mm stroke.

MORE OPTIONS

For all our electro-thermal actuators MVX, MCA, MVR and for all our electro-mechanical actuators MVT, MVC standard ring nut is M30x1,5 (for assembling the actuator onto the valves). M28x1,5 is available as a variant by adding **PS107** at the end of the actuator part-number.

For example:

MCA230L - standard version with M30x1,5 ring nut

MCA230LPS107 - special version with M28x1,5 ring nut

MVC403S - standard version with M30x1,5 ring nut

MVC403SPS107 - special version with M28x1,5 ring nut

In order to avoid seat & plug wearing issues we recommend not to exceed 12 bar differential pressure.

- 1) For applications with fluids -10 °C / -20 °C, when ordering replace letter "P" with letter "T" in the part-number e.g. 3FAA40T
For applications with fluids -20 °C / -25 °C, when ordering replace letter "P" with letters "TPS132" in the part-number e.g. 3FAA40TPS132

MORE OPTIONS

3FGB valves with stainless steel plug

3FGB valves are also available with stainless steel plug and stainless steel stem packing, both AISI 304. Just add PS73 at the end of the part-number, for example: 3FGB65PS73

"PS89"

2FGB - 3FGB valves with grooved connections suitable to Victaulic clamps
For example: 3FGB65PS89

→ 3-way Globe Valves

3FIA series

3-way mixing globe valves **PN16** and **PN40** with stainless steel body and internal parts.
Fluid temperature range: -30 °C to +180 °C (Low temperature extension -60 °C)

PN16 models: DN65, 100

PN40 models: DN25, 32, 40, 50, 80

Linear flow characteristic, V-port plug

3FIA valves are motorized by MVE actuators

(assembled on the valve in our factory, please include "MVEAV-10" code).

Valve Body: Stainless steel AISI 316 ASTM CF8M

Trim (plug-seat): 316L

Stem: 316L

Stem Packing: PTFE

Plug and Seat sealing: PTFE

Actuator: See data sheets for MVE and MVH actuators

Valve/Actuator connection: U-bolt connection

Actuators

Actuators for small globe valves with spring and PICVs 300 N

MVT.S is a compact actuator suitable to motorize small globe valves and PICVs typically used in terminal units where fast control is required. All models provide 300 N force over a maximum stroke of 9 mm.

MVT503S and **MVT503SB** models are equipped with a last generation electronic card that implements diagnostic and an algorithm for auto-calibration of the stroke. They are equipped with 3 LEDs visible through the cover showing the state of operation of the actuator (including errors).

MVT503SB is dedicated to Libra PICVs with 4 mm stroke. It is possible to limit the maximum stroke of the valve via dipswitch on the board.

MODEL	TIMING [s]	POWER SUPPLY [Vac]	CONSUMPTION [Va]	OTHER FEATURES
MVT203S	11,5 s/mm @ 50 Hz	230	16,2	3 position
MVT403S			2,2	
MVT503S	9,4 s/mm @ 60 Hz	24	3,6	0÷10 / 2÷10 Vdc, 4÷20 mA, proportional control
MVT503SB			3,6	

Actuators for globe valves up to 2" 450 N

Series **MVB** - Bidirectional motor for VSB - VMB valves with threaded connections ½" to 2" and related versions with flanged connections 15 to 50 mm (VSB.F - VMB.F) and tight shut-off versions (VSBP.M - VMBP.M).

Also suitable to 2TGB15B - 3TGB15B ½" valves (pages 22 and 25).

IP50

MVBC: rain-proof protection for all MVB actuators

MODEL	TIMING [s]	POWER SUPPLY [Vac]	COSUMPTION [Va]	OTHER FEATURES

MVB26			5	
MVB28			5	
MVB46			5	
MVB46P	60	24	5	3 position with 1 kOhm auxiliary potentiometer
MVB36	60	24	5	proportional potentiometric
MVB52	37	24	5	Vdc/ current proportional control. Ranges: 6÷9, 4÷7, 8÷11, 0÷10, 2÷10, 1÷5 Vdc, 4÷20 mA. Default setting: 0÷10 Vdc
MVB56	60	24	5	MVB mounting on valve body

Actuators

MVC NEW

Compact actuator with 300 N force

MVC is a new range of linear actuators designed to motorize globe valves and PICVs used on hot/chilled water systems e.g. AHUs, solar plants, heating / cooling and dehumidification batteries, 2-pipe or 4-pipe FCUs and more.

All models provide 300 N force over a maximum stroke of 16 mm.

MVC actuators electronic card is equipped with two micro-switches and a mechanism to ensure a **torque limit** performance.

MVC503 and **MVC503R** proportional models are equipped with a new generation electronic card also featuring diagnostic and self-stroking algorithms. Additionally, 3 LEDs visible through the cover show the operating status of the actuator and alarm.

MVC203 (3 pos., 230 Vac), **MVC403** (3 pos., 24 Vac) and **MVC503** (proportional, 24 Vac) are standard models without emergency return function and speed is **10 s/mm**. They are perfect for

retrofitting purposes to replace actuators from different manufacturers (for example, to motorize MZX, VZX, MEU, FEU, VEU Satchwell valves by means of AG73 linkage kit).

MVC503R (24 Vac/dc) is a special model with **electronic emergency fail-safe function** in case of power loss.

A dip-switch on the PCB allows an easy setting on Normally Open or Normally Closed position. There is a LED dedicated to the charge status of the super-capacitor.

Speed is 5,5 s/mm (3 s/mm when operating in fail-safe mode).

CONTROL SIGNALS:

MVC203 and **MVC403**: On/Off or 3 pos.

MVC503 and **MVC503R**: proportional 0-10 Vdc, 2-10 Vdc, 0-5 Vdc, 6-10 Vdc, 4-20 mA (selectable on the PCB).

Proportional models provide 2-10 Vdc feedback signal.

Actuators

UP TO 2200N FORCE!

MVE

Universal Actuator for globe valves

The MVE is a flexible electro-mechanical actuator for the control of two and three way globe valves in: Heating and Cooling systems, Air handling units, District Heating plants, Industrial Temperature Control systems. The MVE can be controlled either by a proportional (modulating) signal or by an increase/decrease (Floating) signal simply changing switch settings on the field. It is designed for an easy installation to any CONTROLLI flanged valve. Linkage kits are available for threaded valves as well as for valves of other manufacturers.

The Actuator has a fine resolution (500 steps on the full stroke range) for a very accurate fluid control and it is able to self-calibrate on a different stroke without the need of any user action. A Plug&Play function is available as well calibrating the actuator on the valve at the very first power-on only. The MVE implements an smart control algorithm with self diagnostic and alarm functionality in case of unexpected operation, feedback of alarms to the user is provided by LEDs (Green and Red) on the control board.

MVE is available with standard yoke and with a compact yoke for applications where compact dimensions are required and each version can be available with close-off force 400 N, 600 N, 1000 N, 1500 N and 2200 N.

MVE5.. - MVE5..S

MVE is available with very low voltage power supply 24 Vac or 24Vdc.

MVE2.. - MVE2..S

MVE is also available with high voltage power supply 230Vac with the same functionality of the 24Vac/dc

* MVE2... - MVE2...S are not UL Listed.

Actuators

MVE.R

Electric actuators with Emergency fail safe function

All features such as input/output signals, automatic or manual calibration, diagnostic, resolution, auxiliary end switches, manual override etc. are the same as standard MVE actuators. Additionally MVE.R provide electronic emergency function based on super-capacitor technology in the event of a power failure.

Emergency position (retracted or extended stem) selectable by PC board.

Opening/closing times, also in case of emergency return: approx. 1 mm/s for proportional control or 60 s (regardless of valve stroke) for floating control.

One model provides both stem up / stem down options, through jumper setting.

Charging time about 130 s.

Super-capacitor life: 10 years

MVE.R actuators can be controlled either by a proportional (modulating) signal or by an increase/decrease (floating) signal. It is easy to mount and connect the actuator onto a valve. Direct mounting is possible to any CONTROLLI flanged valve. Linkage kits are available for CONTROLLI threaded valves as well as for valves of other manufacturers.

Thanks to self stroking functionality and availability of various linkage kits, these actuators can also fit on many valves from

other manufacturers.

MVE.R actuators have an excellent resolution (500 steps along the whole stroke range) for very accurate flow control and are able to self-calibrate

on different stroke values without any operation by the installer (this function is DIP switch selectable on site).

More over, MVE.R actuators are provided with a self diagnostic functionality very useful in case of unexpected situations and in such an event the green and red LEDs on the electronic board will blink. Examples of faulty conditions that are detected:

- stroke out of range 5-60 mm;
- unexpected stall condition (e.g. valve is stuck);
- missing expected stall condition (e.g. valve/actuator connection is loose);
- voltage supply out of range.

Globe Valve Actuators with Spring Return 700 N

Series **MVH** - For all valve bodies, self-adjusting stroke 9 to 50 mm - Direct-reverse action -

For VSB-VSB.F VMB-VMB.F valves only, add linkage AG62 - Protection IP55.

MODEL	TIMING DEPENDING ON VALVE STROKE [seconds] ¹			SUPPLY [Vac]	CONSUMPTION [VA]	ACTION	OTHER FEATURES
	16,5	25	45				
MVH56EA	17 (45)	25 (60)	48 (114)	24	15	Vdc/mA proportional control or floating control. Default setting: 0 to 10Vdc	with spring return stem up
MVH56EC	17 (45)	25 (60)	48 (114)				with spring return stem down

1) The values in brackets indicate the return time by spring return. By spring return: MVHEA closes two-way valves and direct way in three-way valves, MVHEC opens two-way valves and direct way in three-way valves. This is valid for all valves except 2FGA, 2FGA.B, 2FAA, 2FAA150B in which it happens the opposite.

Accessories for Actuators

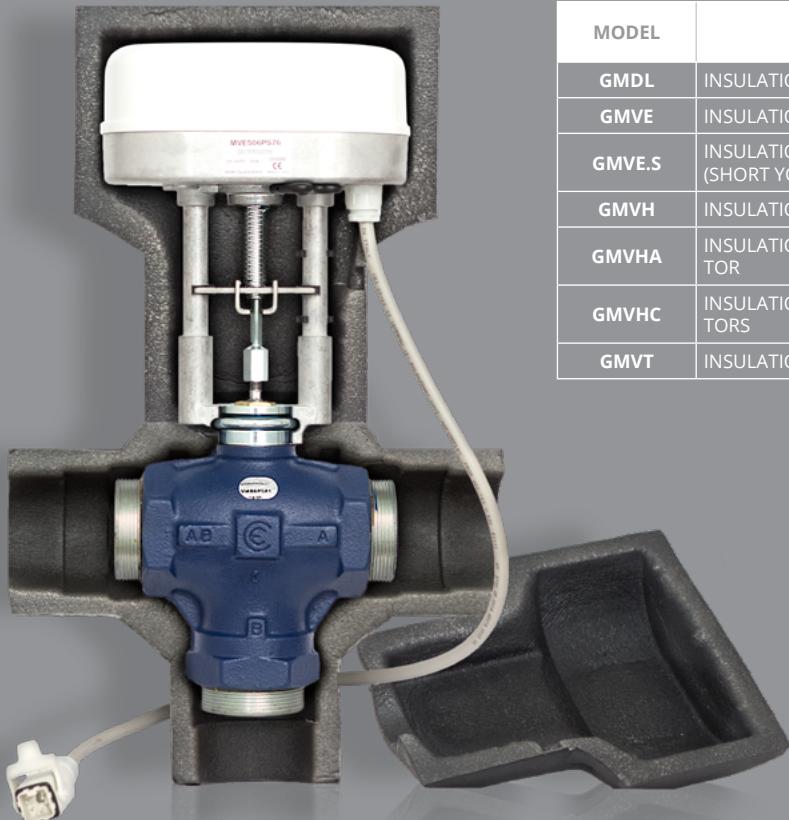

MODEL	DESCRIPTION
244	STEM HEATER 24VAC FOR MVB ACTUATORS ON VSB, VMB, VSB.F, VMB.F VALVES
248	STEM HEATER 24VAC FOR MVH AND MVE ACTUATORS WITH THREADED OR FLANGED VALVES
D36	ONE STROKE-END AUXILIARY MICROSWITCH ADJUSTABLE ON THE WHOLE STROKE FOR MVB
DMDA	TWO AUXILIARY MICROSWITCHES FOR MDA
DMVE	TWO AUXILIARY MICROSWITCHES FOR MVE, MVH..E
DMVH	TWO AUXILIARY MICROSWITCHES ADJUSTABLE ON THE WHOLE STROKE FOR MVH
MVBC	RAIN-PROOF PROTECTION
MVBD	MICROSWITCH DRIVEN BY MANUAL CONTROL KNOB. SUPPLIED ONLY FACTORY-MOUNTED
MVBHT	SPACER FOR MVB. TO BE USED WITH V.B/V.BF VALVES WITH TEMPERATURE FROM 120 TO 140 °C
MVHPA2	1000 OHM AUXILIARY POTENTIOMETER FOR MVH26
MVHPA4	1000 OHM AUXILIARY POTENTIOMETER FOR MVH46
MVHT	SPACER FOR HIGH TEMPERATURE FOR MVH. TO BE USED WITH VALVE BODIES WITH FLUID TEMPERATURE HIGHER THAN 150°C (2F-3F)

All accessories, except MVBD, are supplied separately. Mounting is carried out by the user.

Flanges Options

MODEL	DESCRIPTION
A125-2	DRILLED FLANGES WITH ANSI (ASA) 125 BOLT HOLES FOR 2-WAY VALVES 2FGA.B, 2FGB, 2FGB.B, 2FSA (DN50 TO 65), 2FSA.B (DN50 TO 80), 2FGA (DN25, 32, 50, 65)
A125-3	DRILLED FLANGES WITH ANSI (ASA) 125 BOLT HOLES FOR 3-WAY VALVES 3FGB, 3FSA (DN50 TO 65)
A150-2	DRILLED FLANGES WITH ANSI (ASA) 150 BOLT HOLES FOR 2-WAY VALVES 2FAA150B, 2FSA (DN50 TO 65), 2FSA.B (DN50 TO 80), 2FAA.B (DN50 TO 125), 2FAA (DN32 TO 65)
A150-3	DRILLED FLANGES WITH ANSI (ASA) 150 BOLT HOLES FOR 3-WAY VALVES 3FAA (DN50 TO 125), 3FSA (DN50 TO 65)
A300-2	DRILLED FLANGES WITH ANSI (ASA) 300 BOLT HOLES FOR 2-WAY VALVES 2FSA, 2FSA.B, 2FAA.B (DN32 TO 65 AND DN100 TO 125), 2FAA (DN15 AND DN32 TO 65)
A300-3	DRILLED FLANGES WITH ANSI (ASA) 300 BOLT HOLES FOR 3FSA, 3FAA (DN32 TO 65 AND DN100 TO 125)

Insulation jackets

MODEL	DESCRIPTION
GMDL	INSULATION JACKETS (2X SHELL WITH VELCRO STRIPS) FOR MDL ACTUATORS
GMVE	INSULATION JACKETS (2X SHELL WITH VELCRO STRIPS) FOR MVE ACTUATORS
GMVE.S	INSULATION JACKETS (2X SHELL WITH VELCRO STRIPS) FOR MVE_S ACTUATORS (SHORT YOKE)
GMVH	INSULATION JACKETS (2X SHELL WITH VELCRO STRIPS) FOR MVH ACTUATORS
GMVHA	INSULATION JACKETS (2X SHELL WITH VELCRO STRIPS) FOR MVH56EA ACTUATOR
GMVHC	INSULATION JACKETS (2X SHELL WITH VELCRO STRIPS) FOR MVH56EC ACTUATORS
GMVT	INSULATION JACKETS FOR MVT 300 N ACTUATORS

→ Motorized Ball Valves

Motorized Ball valves with characterized flow control

"New performing range of brass valves with chrome plated brass balls and electric rotary actuators with high IP level"

Ball valves range

- » **2-way** and **3-way** valves (mixing/diverting) with high Kvs values
- » Tight close-off (**0% leakage**)
- » Fluids temperature from **-20°C to +130°C**
- » Up to **10 bar close-off pressure**
- » Valve bodies with high pressure rates **PN32** and **PN40**
- » **Equal percentage flow curve** for modulating models only

→ Motorized Ball Valves

Actuators range

- » No need of stem heater with fluids below 0 °C: the actuator has its own system to prevent ice
- » High protection degree **IP65** on most actuators
- » Auxiliary micro-switches on all actuators
- » Opening or closing time: 40 seconds (10 Nm models) or 60 seconds (16 Nm models)
- » Manual override

10 Nm

16 Nm

MDL32	15 - 27	6	55 to 160	24	1,2	Proportional-potentiometric (165 Ohm)
MDL34	45 - 80	20	55 to 160	24	4	
MDL36	60 - 107	30	55 to 160	24	6	
MDL52	15 - 27	6	55 to 160	24	1,2	Vdc/current proportional control. Ranges: 6÷9, 4÷7, 8÷11, 0÷10, 1÷5 Vdc, or current 4÷20 mA
MDL54	45 - 80	20	55 to 160	24	4	
MDL56	60 - 107	30	55 to 160	24	6	

VARIANTS: in case the MDL2./4. actuators are needed to be supplied with 1 KOhm auxiliary potentiometer, add PA2 for MDL2., PA4 for MDL4. and PA6 for MDL6.: e.g. MDL24PA2, MDL46PA4 or MDL66PA6. In special applications, the actuators can be supplied with 2 or 3 auxiliary potentiometers.

Actuators for Butterfly valves

Series **MDA** - Bidirectional actuator for VFA butterfly valves - Floating (MDA2.-4.) or proportional 0-10 V (MDA5.) control signal - Angular stroke 90° - Manual control - Supplied with linkage for mounting on valve body - Protection IP54.

MODEL	TIMING [s]	POWER SUPPLY	TORQUE [Nm]	ACTION	OTHER FEATURES
MDA22	90	230 Vac	20	Floating	For VFA valves up to DN100
MDA24	150	50/60 Hz	40	Floating	For VFA valves from DN125 to DN200
MDA42	90		20	Floating	For VFA valves up to DN100
MDA44	150		40	Floating	For VFA valves from DN125 to DN200
MDA52	90		20	Propotional 0-10 V	For VFA valves up to DN100
MDA54	150		40	Propotional 0-10 V	For VFA valves from DN125 to DN200
MDAV1	MDA actuators are supplied NOT mounted on valve bodies. In case the actuator-valve assembly is required, order the specific part number MDAV1 together with the models of actuator and valve body.				
MDAV2	MDMA microswitch assembling on MDA actuator				

OPTIONS

MODEL	DESCRIPTION
MDLS5	Electronic card input signal, range 6÷9, 4÷7, 8÷11, 1÷5 Vdc, 4÷20 mA for MDL32/34/36
MDLV5	Electronic card input signal, range 0÷10 Vdc, 4÷20 mA with adjustable start point and span for MDL32/34/36
DMDL	Two auxiliary microswitches SPDT 10 (3) A - 240 Vac adjustable on the whole stroke for MDL
MDLA1	Damper drive linkage for MDL
MDLA2	Linkage for mounting MDL when replacing SL
MDLPA2	Board with 1 KOhm auxiliary potentiometer for MDL2
MDLPA4	Board with 1 KOhm auxiliary potentiometer for MDL4
MDLPA6	Board with 1 KOhm auxiliary potentiometer for MDL6
YS7	Crank-arm in addition to MDLA1 composed of 2 joints and 8-mm rod for dampers with 10 to 18mm shaft with MDL actuator
DMDA	Two auxiliary microswitches for MDA

→ Air damper Actuators

Without Spring Return **MDB** Series. For air dampers up to 4 m². IP54.

Selection and Sizing

For a proper valve selection we need to define:

- Hydraulic circuit: constant flow (3-way) or variable flow (2-way)
- Max Hydraulic pressure for the circuit -- > PN
- Maximum and minimum fluid temperature
- Fluid type (e.g. water, water+glycol, steam, thermal oil, ...)
- Valve function: on/off control, linear flow control or EQM flow control.

Once we have identified the type of valve, we need to select its size and the actuator that will motorize it.

To select the correct type and size of valve the following factors need to be taken into consideration:

- Max working pressure to select the proper PN
- Max temperature and type of fluid
- Max differential pressure achievable by the valve/actuator assembly
- Pressure drop as a consequence of the flow rate
- Flow characteristic, Rangeability, Authority

Each valve is identified by its FLOW COEFFICIENT called Kvs. Kvs, in metric system, represents the flow in m³/h of water (specific weight=1) at the temperature of 15.5°C which causes a pressure drop of 1Kg/cm² (1 bar) when the valve is fully open.

In the USA flow coefficient is called Cv where Kvs = 0.865 Cv
The value of Kvs represents the valve size: -- > **control valves size needs to be chosen according to the calculated Kvs and not according to the pipe size.**

In any case, valve size must not be larger than pipe size.

For calculating the Kvs, we need to know: flow rate and differential pressure. Differential pressure can be selected equal to the pressure drop in the heat exchanger.

Kvs can be calculated:

- using the appropriate formulas available on page 58 for water or steam;
- using the diagrams on pages 56 and 57;
- using our dedicated software for PC (available online).

Each type of valve is subject to a max pressure value = nominal working pressure, indicated by PN (Kg/cm²) depending on valve raw material.

The max differential pressure value represents the max differential pressure between inlet and outlet of the valve, when the valve is fully closed.

This value depends on both the actuator power, which must provide full opening and full closing, and on the mechanical-structural limitations of the valve, as construction type and valve body material, stem and plug type and material, stem packing, etc.

After having selected the necessary Kvs value, we should select the size of the valve matching a Kvs value as close as possible to the calculated Kvs.

The identified valve size can achieve several values of max. differential pressure according to the actuator.

Max. differential values are listed in columns in the previous

pages of this book.

The actuator needs to be selected in terms of force as to:

- guarantee the effective differential pressure across the valve in case of a 3way valve;
- guarantee the effective differential pressure across the valve and the maximum pressure, at the inlet port of the valve, available from the pump, in case of 2way valves. Consequently 2way valves usually require actuators stronger than those necessary for 3way valves.

As a consequence of the differential pressure across the valve the flow is always trying to open the valve.

To keep the plug in the closed position the actuator must exceed this force (close-off pressure).

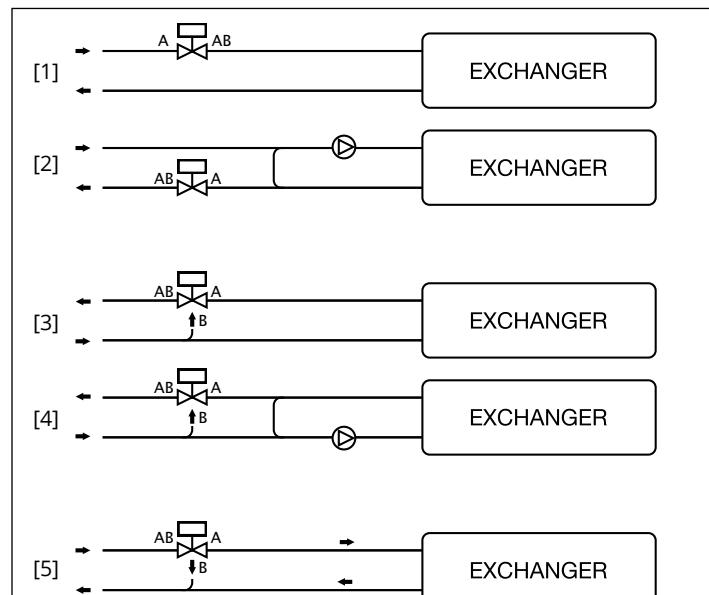

Depending on the valve size and on the differential pressure across the valve we need to select an actuator with a close-off higher than the differential pressure.

The larger is the valve the more is the force that the actuator needs to have to achieve the close-off.

For 2-way valves with high differential pressure we recommend using our pressure balanced plug valves 2TGA.BT (from ¾" to 2" -- > page 23) and 2FGB.B, 2FSA.B, 2FAA.B, 2FGA200B (from DN65 to 200 -- > page 31).

This is a cost effective alternative to selecting a standard valve with a strong actuator.

Complete details of differential pressure values for all our valves are listed in our data sheet Valves_DBL337e.pdf available online on our website.

[1] 2-way valve: variable flow to the heat exchanger

[2] 2-way valve: constant flow to the heat exchanger

[3] 3-way valve MIXING: variable flow to the heat exchanger

[4] 3-way valve MIXING: constant flow to the heat exchanger

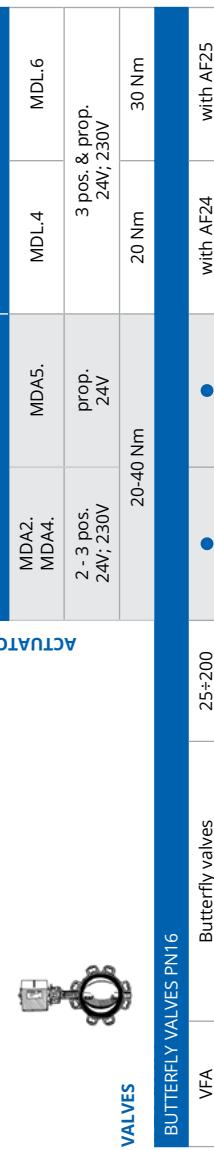

[5] 3-way valve DIVERTING: variable flow to the heat exchanger

We recommend using our 3way valves as mixing, when used as diverting max. differential pressure has to be limited to the 40% of the values listed in our data sheets. If used as diverting, inlet port is AB.

• Valve Sizing Diagram for Fluids

$$K_{vs} = \frac{Q \cdot 10}{\sqrt{\Delta p_v}}$$

Q = flow rate in m^3/h
 Δp_v = pressure drop in kPa

The recommended valve pressure drop must be at least equal to the load.

Example for fluids with relative density 1 kg/dm³ (water)

In order to size a control valve with:

FLOW RATE: 7,5 m^3/h of water

PRESSURE DROP: 55 kPa

Use the diagram as follows:

- Identify the crossing point between the line starting from the flow rate value (7,5 m^3/h) and from the pressure drop value (55 kPa).

This point corresponds to the required flow coefficient, i.e. K_{vs} 10.

Therefore, the control valve must have K_{vs} 10.

Example for liquids having relative density different from 1 kg/dm³

In order to size a control valve with:

FLOW RATE : 150 m^3/h having (0,9 kg/dm³) relative density

PRESSURE DROP: 80 kPa

Use the diagram as follows:

Identify the crossing point (right side of the diagram) between the line starting from the relative density value (0,9 kg/dm³) and the inclined line starting from the flow rate value (150 m^3/h).

Identify the crossing point between the line starting from the crossing point above and the other from the pressure drop value (80 kPa).

This point corresponds to the required flow coefficient. Therefore, the control valve must have approximately K_{vs} 160.

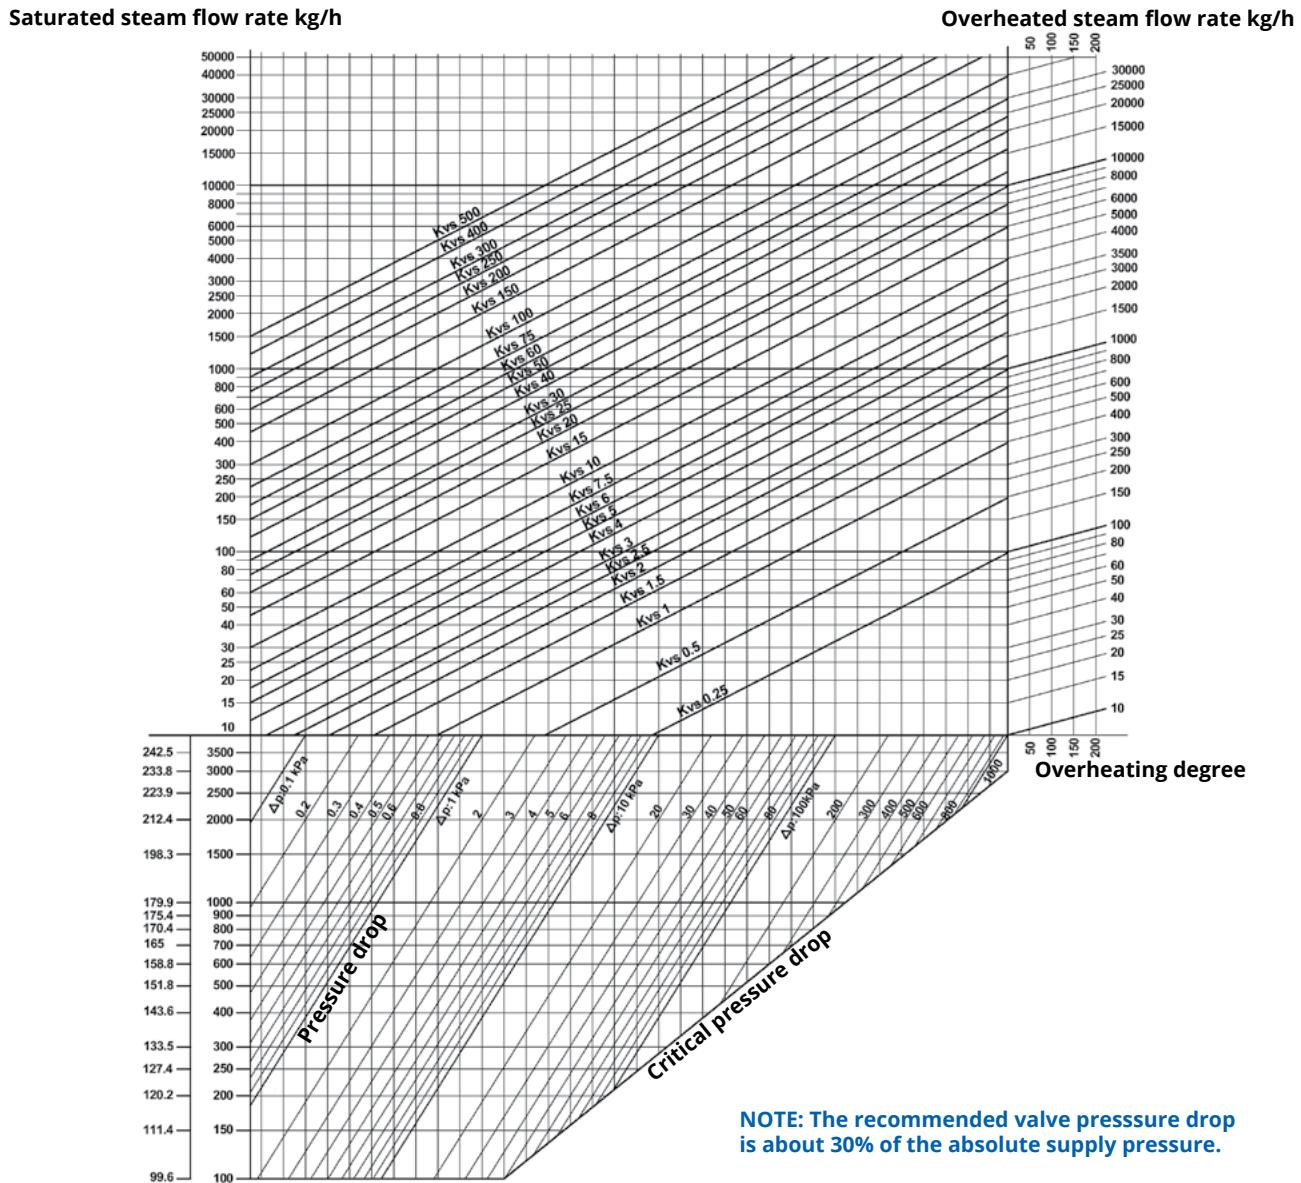

Example with diathermic oil.

It could be convenient to size the valve on diathermic oil using the water diagram. To do this, it is necessary to apply the following conversion formula, which takes into account the mass and the "average" specific heat of diathermic oil:

$$Q = \frac{K \text{ calories}}{\Delta t 500} \text{ in } m^3/h = \text{water}$$

→ Valve Sizing Diagram for Steam

$$K_{vs} = \frac{Q}{22.8 \cdot \sqrt{\Delta p_v} \cdot P_u}$$

Example for saturated steam:

FLOW RATE: 4700 Kg/h of saturated steam
 ABSOLUTE PRESSURE
 UPSTREAM: 850 kPa
 PRESSURE DROP: 160 kPa

Use the diagram as follows:

- Identify the crossing point between the line starting from absolute pressure upstream the valve (850 kPa) and the inclined line corresponding to the pressure drop value (160 kPa).
- Identify the crossing point between the line starting from the crossing point above and the line from the flow rate value (4700 Kg/h). This point corresponds to the required flow rate coefficient: Kvs 63.

Example for overheated steam:

FLOW RATE: 140 Kg/h of overheated steam
 ABSOLUTE PRESSURE UPSTREAM: 350 kPa
 TEMPERATURE: 209 °C
 PRESSURE DROP: 100 kPa

Calculate the overheating degree of steam as follows:

- On the left side of the diagram, read the temperature value corresponding to 350 kPa (139 °C). The overheating degree is: $209 - 139 = 70$ °C

Use the diagram as follows:

- Identify the crossing point "A" (right side of the diagram) between the line starting from the overheating value (70 °C) and the inclined line corresponding to the flow rate value (140 Kg/h).
- Identify the crossing point "B" between the line starting from the value of pressure upstream (350 kPa) and the inclined line corresponding to the value of pressure drop (100 kPa).
- Identify the crossing point between the line starting from the points "A" and "B".

→ Valve Sizing

How to Calculate Kvs

Flow coefficient Kvs is the flow rate of water in m³/h passing through a fully open valve at a 100 kPa pressure drop.

$$\text{a) Liquids } kvs = 10 \times Q \times \sqrt{\frac{r}{D_p}}$$

Q = flow rate m³/h

D_p = pressure drop (kPa)

r = relative density

The D_p pressure drop should be determined as follows:

- Equal or higher than the D_p of the circuit under control, in case of variable flow applications
- Equal or higher than the D_p of the supply circuit, in case of constant flow applications

$$\text{b) Steam } kvs = \frac{100 \times G \times C}{20.3 \sqrt{P_2 \times D_{pv}}}$$

G = flow rate (kg/h)

C = 1 + 0.0013 (t-ts)

t = steam temperature in working conditions

ts = saturated steam temperature at P₂ pressure

P₂ = pressure downstream (kPa)

D_{pv} = pressure drop (kPa)

Choose the valve with the Kvs closest to the calculated one.

Water Systems

Two-way valve

For this application the pressure drop through the valve must be high, in order to have a good control flow characteristic and a properly working system.

- 1) The valve pressure drop must be 30 to 50% of the pressure upstream the valve.
- 2) The valve pressure drop must be equal to, or higher than the pressure drop of the coil or heat exchanger under control, in particular:

TEMPERATURE DROP OF HEAT EXCHANGER DESIGN OF VALVE PRESSURE DROP

30 °C	Equal to pressure drop of heat exchanger
20 °C	Twice as pressure drop of heat exchanger
10 °C	Three times as pressure drop of heat exchanger

Three-way mixing valve

For mixing valve a high pressure drop is not normally required even when used in primary and secondary water circuits to control supply temperature to users.

As a general rule, the valve must have a pressure drop similar to the one of the heat exchanger.

Three-way diverting valve

Three-way diverting valves are used to control flow to heat exchanger and, therefore, the pressure drop through the valve. For proportional systems it must be high.

Note:

When selecting pressure drop, you must not exceed the above-mentioned values because an undersized valve could produce:

- Noisy operation and vibration of the plug
- Rapid wear of plug and seat due to high speed of the fluid through the valve.

→ Valve Sizing

Overheated Water Systems

For this application the valves can be two- or three-way type.

The valve pressure drop must be high, in order to have a good control flow characteristic and a properly working system.

The principles and rules for correct sizing are the same as "WATER SYSTEMS".

Steam Systems

For low pressure steam systems (up to 2 kPa), the pressure drop through the valve must be from 60 to 80 % of the pressure available upstream the valve.

STEAM PRESSURE UPSTREAM THE VALVE	VALVE PRESSURE DROP
0.5 bar (50 kPa)	40 kPa
1.0 bar (100 kPa)	70 kPa

For high pressure steam systems (above 2 bar) the pressure drop through the valve must be from 30 to 40% of the pressure available upstream the valve.

STEAM PRESSURE UPSTREAM THE VALVE	VALVE PRESSURE DROP
200 kPa	80 kPa
600 kPa	200 kPa
1,000 kPa	300 kPa

For on/off valves there are no particular rules to follow: pressure drop may be 10 to 20% of inlet pressure, but the valve is normally pipe sized.

Note:

Do not size valves for high pressure steam with pressure drop higher than 50% of absolute pressure upstream: beyond this percentage thermodynamic problems could affect valve efficiency and life.

Heat Transfer Oil Systems

The most commonly used valve type is three-way with linear characteristics, in order to ensure a constant flow to the boiler by constant speed.

Two-way valves can be used for several low-power users and wherever a balanced-plug valve is mounted between supply and return boiler.

The pressure drop of three-way valves must be at least equal to or higher than the one of the heat exchanger.

For a single user control, the valve must have a pressure drop from 30 to 50% of the system pressure drop.

For two-way valves, see also the "WATER SYSTEMS" section.

We focus on BMS future
